Calculus and Analysis > Complex Analysis > Residues > The diagram above shows an example of the residue theorem applied to the illustrated contour. The residue theorem can even be used when integrating along a contour that is not a closed curve. In this case, the integral is equal to the integral of the function along the contour, plus the integral of the function along the boundary of the contour. This is because the integrand does not have any poles inside the contour. Integrals using residues can be confusing, and some text books show the . try using it with previous examples in problem sheets that you would have used Cauchy's Theorem and.
